

PRELIMINARY: Mom and Dad haven't gone through this yet to make corrections. Some information is missing.

This document is an index for images either scanned from original slides, negatives, or prints, or from digital images or videos. The **FILE ID** field is the name of the file. It is a six digit number providing a maximum of one million images. The **SOURCE** field tells what the source of the image was and who has it. The **EVENT** field tries to categorize pictures into various events like birthdays, Christmas, etc. The **DATE** field is the date of the image. The **LOCATION** field is where the image was taken. The **DESCRIPTION** field gives information about the image such as names of people, etc. This index can be sorted on the various fields to make it easier to group them.

The archive copy of the images is a tagged image format (tif) file. This format was chosen because it is lossless having no compression. Each image file is about 10 Mbytes in size for an image size of about 3200 by 2200 pixels. The resolution of the scanner is adjusted based on original image size to get the file size to always be about 10 Mbytes. Videos are in various formats such as AVI or MPG.

The images have also been converted to JPEG format. The compression was set to 15 percent which results in a file size about 9 percent of the original. This allows putting many more images on a CD. However, the JPEG file format isn't lossless so some image quality is lost in the compression. For the most part this would never be noticed. If you're looking at jpeg images then it isn't a copy of the archive copy. John Larsen maintains the archive.

The archive has been organized into a hierarchy of folders with the top level called "images". Each subfolder is named with the range of images it contains. The contents of each archive subfolder fit on one 700 MB CDR which is the most common format at this time. Future storage technology will no doubt make it possible to store the entire archive on a single CD or DVD.

This porch was built by Uncle Will Sorenson to replace the much smaller one from which I fell, on my head, every day (it seemed) for two or three years. The old porch was so narrow I couldn't get around the screen door as I pulled it open

000674		1946-11-22	Brigham City, Utah	November 22, 1946, a Brigham City 6th Ward Bazaar held at the old Amusement Hall. The church used to hold bazaars every year as fund raisers. The women would make clothes, food and crafts to sell. This practice continued until the mid 1970's. In 1946, the LDS Church sold the 6th Ward Chapel and this Hall (both buildings built about 1901) to the Presbyterian Church. Both buildings still stand as of January 2003.

				The Amusement Hall was used as a public elementary school in its early years. Merlin R. Larsen attended school there for the first few grades until a new school building, the Central School, was constructed on the block west of the Brigham City Tabernacle. The Central School was used until 1947 when it was destroyed by a fire.
